

## Why is there an emergency plan?

Planning is an important part of FPL's strategy to protect you and your family in the unlikely event of an emergency at Turkey Point.

State and local officials, in conjunction with FPL, have prepared a detailed emergency plan for people who live, work, visit or go to school within 10 miles of the plant. The plans are tested by actual evaluated exercises and inspections.

## Classifications of nuclear plant events

The four terms below are used to describe events at nuclear plants. Only two may involve public actions such as staying inside your homes or leaving the affected area. You should know these terms. FPL notifies county, state and federal authorities in each of the following situations:

**Unusual Event** – Declaration of an Unusual Event may be caused as the result of a minor incident, such as an injury to a plant worker or the threat of severe weather. *No public action is required.*

**Alert** – Declaration of an Alert may be caused by a minor incident that affects or could potentially affect reactor safety. *No public action is required.*

**Site Area Emergency** – Declaration of a Site Area Emergency may be caused by a more serious incident such as a major leak from the reactor coolant system or fire in a safety system. Radioactive releases are possible or are occurring. *Sirens would sound, alerting you to tune to a local radio or television station.*

**General Emergency** – Declaration of a General Emergency is the most severe emergency classification. Radioactive releases which could affect the off-site population are possible or are occurring. *Sirens would sound, alerting you to tune to a local radio or television station.*

## What is an Emergency Planning Zone?

Federal authorities have established a 10-mile Emergency Planning Zone as the basis to protect the public in the event of a nuclear emergency.

## How would you be notified of an emergency?

In the event of a serious problem at the Turkey Point nuclear power plant, Emergency Management officials may use a variety of methods to notify people living within 10 miles of the plant.

- Sirens – (Tune to local radio or television stations)
- Emergency Alert System (EAS)
- Route Alerting

### AM Radio

WIOD-610\* (E)  
WINZ-940 (E)  
WAQI-710 (S)  
WQBA-1140\* (S)

### Television

(E) English (S) Spanish

In an actual emergency, sirens would sound for at least 15 minutes. Periodic siren tests are conducted by Miami-Dade County Emergency Management officials on the first Friday of March, June, September and December at 1 p.m. The siren test is 20-30 minutes long.

Light Company**

**TO THE PARENTS OF  
STUDENTS ATTENDING  
PUBLIC SCHOOL IN THE SOUTH  
MIAMI-DADE COUNTY AREA**

Your child's school is located within a 10-mile area surrounding Florida Power and Light's Turkey Point Nuclear Power Plant.

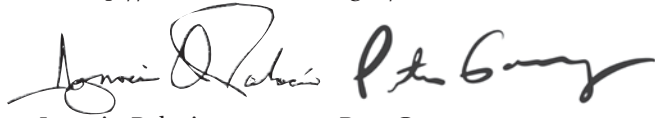

Federal Law requires that local government develop evacuation plans for this area. We have no reason to believe there will be an incident at the nuclear facility which would in any way endanger the public. However, our concern for the health and safety of your children has prompted the development of evacuation safeguards in the remote possibility that students should have to be moved from the affected area.

Should your child's school be evacuated, you must pick up your child at the appropriate host school. All students in the evacuation area will automatically be transported to a host school outside the affected area.

**DO NOT ATTEMPT TO PICK UP YOUR CHILD FROM THE EVACUATED SCHOOL. POLICE AUTHORITIES WILL NOT ALLOW ANYONE TO ENTER THE EVACUATED ZONES.**

To determine which school your child will be taken to, please refer to the next page.

For further information, contact the Miami-Dade County Public Schools Division, Emergency Management at 305-995-4900 or the Miami-Dade Office of Emergency Management at 305-468-5400/TDD 305-468-5402 or online at <http://www.miamidade.gov/oem>.
